

C1  
Con 4

70. A food product, comprising the flesh of an animal, wherein said animal is raised by the method as claimed in Claim 9.

71. A food product, comprising an egg, wherein said egg is from poultry raised by the method as claimed in Claim 9.

---

REMARKS

Applicant respectfully submits that the claimed method and products are believed to be novel because the composition of the present invention involves the novel use of the claimed microorganisms capable of producing high concentrations of omega-3 highly unsaturated fatty acids. Applicant believes that Claims 69-71 are allowable because animals fed the microorganisms of the present invention incorporate the omega-3 highly unsaturated fatty acids into their flesh, eggs and other products of these animals, thereby increasing the intake of omega-3 highly unsaturated fatty acids by those humans that consume them. Applicant also believes that Claims 9, 14-36, 42-49, and 53-68 are in condition for allowance as indicated in the Preliminary Amendment dated July 10, 1992. As such, all claims are believed to be in condition for allowance and the same is requested.
